Winter 2016-2017

Our Programs and Field Trips Help You Meet National Science

Live Animals

Have our animal friends made it to your classroom this year? WCCB has turtles, snakes, hissing cockroaches, and a salamander who would love to interact with your students. Each program features an informational session about the live animal. There will be time at the end for an up close view, hands on session, and questions.

Atlatl

WCCB is excited to offer atlatl programs for 5-6th grade students. Atlatls are ancient tools used to hunt megafauna. The atlatl was a result of early humans realizing that throwing a spear by hand was not effective, so they designed a tool. This program is designed for outside only and could easily be a field trip activity. Test your skills at spear throwing.

Events / New Exhibit

January

Snowshoe Hike

1/8 at ANC 1PM-3PM

1/14 at ANC 1PM-3PM

1/21 at ANC 1PM-3PM We will take a winter hike if there is not enough for snowshoeing.

Ice Fishing Worksop

1/28 Ice Fishing at ANC 8:30 AM

February

Owl Prowl

2/2 at ANC 6:30PM

Snowshoe Hike

2/13 at ANC 6PM-7PM Valentines Snowshoe/Night Hike

Antler Program

2/18 at ANC 1PM

March

3/1 Day Camp Registration via phone or in person

3/18 Solar Eclipse Program @ ANC 6PM

3/25 Geocaching with Parks and Recreation @ Pickard Park 1PM

Priscilla Gaumer Butterfly and Pollinator Exhibit Updates

Staff have been busy working on the Priscilla Gaumer Butterfly and Pollinator Exhibit. Many of the items have been purchased that will be featured in the exhibit. The new live butterfly and moth enclosures were tried out this summer and housed monarchs. The honeybee box with interactive pull out cards is ready to go along with the beekeeping equipment and books.

The honeybee dance floor tiles will be installed this winter. These honeycomb tiles will give visitors a chance to “dance” like a honeybee and learn about how they communicate to each other.

The swallowtail butterfly photo option has arrived and will be installed after the flooring and panels have been completed.

We are still in need of funding before purchasing the educational panels for the exhibit. Be a part of history and education by making a donation via the link <https://www.razoo.com/story/Priscilla-Gaumer-Pollinator-Project> or by spreading the word to family and friends. No donation is too small.

Program Ideas

Do you have a program topic not on our list, please let the naturalists know and we will tailor an educational program to fit your needs.

PreK-Kindergarten

Chickens Aren't the only ones

Listen to *Guess What is Growing Inside This Egg* and discover birds aren't the only animals that lay eggs. Students will have a chance to examine bird replica eggs, discuss the life cycle of a bird, and possibly see live chicks.

Birds

Read the story *Bird Calls*, hear different bird sounds, examine bird mounts, and make a bird craft.

The Mitten

Students will hear the story *The Mitten* by Jan Brett with the use of a giant mitten. They will learn about some of the animals in the story and make a mitten craft.

Fishing Fun

Listen to the story *Catfish, Cod, Salmon, and Scrod*, learn about IA fish, cast a line for magnetic fish, and sing a fish song.

Bear Snores On

Bear might spend most of his winter asleep but find out what other animals do during the winter months. Listen to the story *Bear Snores On* and look at animal furs & skulls from the story.

Earth Day & Recycle

Students will learn about reducing, reusing and recycling. They will listen to the story *Earth Day*, find out ways they can help the environment, and make a recycled craft.

Insect Basics

So what makes an insect an insect? Learn about an insect's life cycle, body parts, and unique features. There may be a visit from the hissing cockroaches.

Let it Snow

In Iowa we are almost always guaranteed snow during the winter months, but what exactly do you know about the white stuff, besides school gets cancelled when it falls? In this program we will learn about the basic shapes of snowflakes, how snowflakes are created, study fallen snow, and why in your lifetime you will never see two snowflakes that are identical.

Furry Animals

Students will learn about furry animals found in Iowa and touch different animal furs. They will also play a fun animal tail game.

Wild Turkeys

This hands on activity will teach students about habitat, predators, diet, and special characteristics of the wild turkey. They will also hear a fun hide and seek story, play a game, listen to a turkey call, touch feathers, and see a replica egg.

Busy Beavers

Learn all about a beavers special adaptations. Students will have a chance to climb in a human sized beaver lodge, feel a fur, and examine a skull.

First & Second Grade

Wiggly Wonderful Worms

Listen to the story *Diary of A Worm*, identify body parts of the worm, and explore how they move, and their importance to the soil environment. There will be live earthworm visitors to wiggle around.

Seeds, Seeds, Seeds

Student will listen to the *Tiny Seed*, learn about the parts of seed, experiment with a bean seed, learn how seeds travel, and look at different seed types. Mushrooms are different than seeds, but find out more about fantastic fungi.

Fabulous Flower

Students will learn about the life cycle of a plant, parts of flower, and animal usage of flowers. They will demonstrate their knowledge by building a flower with veggies.

Bat Loves the Night

Learn about bats through the story *Bat Loves the Night*. Using a puppet and pictures, we will discuss what makes bats so neat and show why they are not so scary. Several real, but not alive, bats will be shown to students.

Lessons from the Lorax

This program uses Dr. Suess' book *The Lorax*

to help students better understand the idea of wise use of our natural resources. Throughout the story we will discuss the decisions that were made and what could have been done differently. Children will make their own truffula tree.

Munching Mouths

Learn about how insects have special adaptations for eating various foods. Students will move around the room trying out various insect mouthparts to see which mouth munches which food. There may be a visit from the hissing cockroaches.

Salamander Room

We will read *The Salamander Room*. Students will learn why salamanders are amphibians, know their life cycle, and play a salamander game. A real, live salamander will come visit as well.

Honeybees

Listen to the story *Honeybees* by Eric Carle, learn about the importance of honeybees, their life cycle, and products from the hive. There might be a surprise peek at live bees inside our portable beehive. (Portable beehive April-May only)

Habitats

Students will examine natural objects to try and determine which habitat is being represented. They will learn what a habitat is and how each is different from one another and how important even backyard habitats are for plants and wildlife.

Third and Fourth Grade

Water Cycle

Water is continually in motion and ever changing. Students will learn about how water cycles through the environment and changes forms. They will become a water droplet and travel from station to station to make a water cycle bracelet.

Creatures of the Night

From bats to owls, meet the creatures that wake up once the sun has set. Find out about adaptations these creatures have for nocturnal

Program Ideas (cont.)

living. This program works well as a night hike too.

Phases of the Moon

Have you every wondered why the moon changes, or what it would be like to live on the moon? Learn all about what its like on the moon and the moon phases. Students will listen to *Phases of the Moon* and participate in a yummy Oreo activity to visually show each moon phase.

Prairie Pioneers

Meet a 1860s pioneer woman. Follow her on her move west by visiting the general store, packing up the wagon and making important decisions on her family's way to life on the Iowa prairie. Optional make your own butter and cracker snack.

Animal Classification

Learn the differences between a mammal, fish, bird, reptile, and amphibian. Special features of each group will be discussed. Students will demonstrate their understanding of each animal group through an animal vertebrate animal grab game.

Native American Games

This active lesson will allow students to play games from different Native American tribes. They will learn about each game and how games helped perfect a skill necessary for survival.

Beaks and Feet

Learn about what make a bird different from other vertebrates. Students will become birds and travel from station to station to see what type of beak works best for each food. They will look at pictures of various beaks and feet.

Owl & Pellets

Learn about the owls of Iowa, find out about the special adaptations of owls, and dissect an owl pellet.

Migration Madness

Students will learn about the wide variety of animals that migrate and why they do. They will participate in an activity to discover the challenges animals can face during migration.

Tree Factory

Students will learn the parts of a tree from inside to outside. They will become a tree to better understand how a tree functions. They will observe a tree ring and determine the trees age.

Fifth & Sixth Grade

Trees

Students will learn tree identification, parts of tree, and the benefits of trees to the environment.

Geology Rocks

This program focuses on Iowa geology. Students will learn the three main types of rocks. They will enjoy making a cookie that features rocks of Iowa "fruit" and learn about how these rocks are used. (This program takes an hour, please advise WCCB of any food allergies prior to scheduling)

Who Dung it?

Although it may be difficult to see some of Iowa's animals, they do leave many clues behind. The challenge is to figure out who left those clues. Students will become detectives to help solve the mystery of just who "dung it" in Iowa. Students will identify and learn about various species through hands on discoveries.

Skullduggery

Students learn how to tell an omnivore, carnivore and herbivore apart by looking at their teeth. They also use a simply key to discover which species skulls belong to.

Wetland Wonders

Students will learn the importance of wetlands to humans and wildlife. They will become part of a wetland to demonstrate how wetlands serve as filters and provide other benefits to the environment.

In Danger

Students will participate in a hands-on game to learn how animal populations can decline. We will explore what this leads to, what it means for a species to be endangered or threatened and learn about at-risk species in Iowa.

Dream Catchers

The children will discover the history behind the dream catcher and make one of their own. This crafty lesson fits in nicely with any Native American lesson.

Leave No Trace

Participants will be introduced to the Leave No Trace Principles and explore their own outdoor ethic through activities and games.

Winter Survival

After your student's finish reading Hatchet or another wilderness survival based book, bring them to the Annett Nature Center to experience survival shelter and fire building.

Archery

This program promotes student education and participation in the life long sport of archery. The program's focus is to provide International style target archery training in physical education classes. All archery equipment will be provided and can be presented inside most gyms or outdoor areas.

Middle School and High School

Archery

This program promotes student education and participation in the life long sport of archery. The program's focus is to provide International style target archery training in physical education classes. All archery equipment will be provided and can be presented inside most gyms or outdoor areas.

GPS

Using handheld GPS units, students learn about how satellites and modern technology help us find our way. Map reading and orienteering may be combined with GPS. This activity can be done in the classroom with an outside component.

Osprey

This Power Point presentation will introduce students to osprey, their life cycle, and migration route. They will see an osprey mount, wings, replica egg, and learn about the reintroduction of osprey in IA and hacking project that was completed at Annett Nature Center.

Programs for all ages

Programs for All Ages

Live Animal Programs

Enjoy a classroom visit from the hissing cockroaches, turtles, snakes, or salamander. Each program will feature the characteristics of the animal and possibly a craft or game that is age appropriate.

Star Lab

This portable and inflatable planetarium provides a unique way for students to learn about earth science and astronomy without leaving the school building! Star Lab programs that are available include: Greek Constellations, Native America Constellations, Plate Tectonics, The Solar System and Milky Way Galaxy, and The Navigation Stars of Lewis and Clark (requires the "Navigation Stars of Lewis and Clark" classroom program).

Snowshoeing

Don't spend all winter inside watching it snow, join us to get out and explore the park on snowshoes. Snowshoeing is easy and a great way to experience park. This activity can be tied into surface area and PSI experiments.

Monarch Migration

Students will learn about the life cycle of a monarch butterfly, host plants, monarch migration, and how to tag monarch for research. During late summer-early fall a live monarch may be brought to the classroom to tag for research.

Tracks

Have you ever seen an animal track in the mud or snow and wondered who made it? During this program students will become animal detectives and learn how to identify common Iowa mammal tracks and read the story they have left behind.

Shocking Developments

Students will learn about different type of electricity, where it is found, and how it is used.

FOSS Kit Complementary Programs

Let the naturalists create a fun and interactive program to complement your FOSS Kit.

Program Scheduling

WCCB strives to reach as many classrooms as possible throughout the year. In order to accommodate programming requests please schedule early. We recommend at least 3 weeks notice for program requests. This will assist staff in tailoring each program to meet your scheduling needs. If you are interested in scheduling a program contact Karen Johlas-Szalkowski at karenjohlas-szalkowski@warrencb.org. WCCB looks forward to working with your school.

Field Trip Ideas

WCC can help you make your next field trip educational and fun! Each field trip is custom made and can take place at the Annett Nature Center or at any of our other county parks.

Half or full day experiences may be planned. The typical day will include several rotations (number dependent on group size). Naturalists will lead one rotation and the others can be lead by teachers or parents. Program outlines and materials will be provided. The following are some possible activities.

Archery ~ upper elementary & above

Birding ~ all ages

Canoe ~ Upper elementary & above

Paddle boarding ~ upper elementary and above

Fishing ~ upper elementary and above

GPS ~ upper elementary and above

Hiking ~ all ages

Insects ~ all ages

IA Animals ~ all ages

Monarch Tagging ~ all ages

Nature Center Tour ~ all ages

Nose Knows ~ upper elementary and above

Orienteering ~ upper elementary and above

Painting with Plants ~ all ages

Park Packs ~ all ages

Pond Study ~ all ages

Snow Shoeing ~ upper elementary and above

Tipi Building ~ upper elementary and above

Unnature Trail ~ lower elementary

Wildflowers & Prairies ~ upper elementary and above

Winter Survival ~ upper elementary and above

Scavenger Hunts ~ all ages

Story Walk ~ lower elementary

Wildlife Games ~ works great for an opening activity choose from a variety of games

Do you have a specific nature or wildlife topic in mind that you would like us to cover? Let the naturalists know and we can tailor your field trip to meet curriculum needs.

Star Lab

Make the night sky come to life inside your classroom. A WCCB naturalist will bring the planetarium to your site. Students will climb inside to see the night sky while learning about constellations. Please note there are specific space requirements for setup. Schedule your starry night program today.

The star lab will be available March 13-20, 2017.
